Continuation of 5. does NOT place the application in condition for allowance because: Applicant argues that Okumura fails to teach "stopping the application of ultrasonic vibration and pressure in response to the detection of the completion of the state of bonding". However, examiner respectfully disagrees with applicant, since Okumura discloses a method and apparatus for ultrasonic bonding with a feedback control in order to see if the current is correct and then relay the information to the correction circuit. Therefore, Okumura is implicitly showing that the ultrasonic bonding is constantly monitored and would have been obvious to one of ordinary skill in the art to "stop the vibration and pressure upon the completion of the bonding", otherwise would result in an improper bond.
